Saveetha Institute of Medical and Technical Sciences
Chennai- 602105

Student Name: A Meghanadh

Reg. No.:192372281

Course Code: CSA5115

Slot: A

Course Name: CRYPTOGRAPHY

Course Faculty: DR.SANGEETHA T

A SECURE CAMPUS RESOURCE SHARING AND EXCHANGE PLATFORM WITH QR-BASED HANDOVER VERIFICATION SECURE ONLINE VOTING SYSTEM USING CRYPTOGRAPHY

Module Photographs: (3 photographs –Module Photo, Individual student contribution module work in the project and presentation image)

MODULE 4 : VOTE COUNTING & RESULT ANALYSIS

- Only valid and verified votes are considered.
- Encrypted votes are securely processed for counting.
- Votes are counted for each candidate.
- The system calculates the total votes received.
- Results are generated automatically.
- The candidate with the highest votes is declared the winner.

Project Description: (here you write what you did in this project (contribution) including Model Description)

The **Secure Online Voting System Using Cryptography** is a secure web-based application designed to conduct online elections while protecting the confidentiality, integrity, and authenticity of votes. The main objective of the project is to prevent unauthorized access, vote manipulation, and exposure of voter information during the voting process. The system provides a secure mechanism for voter authentication, vote casting, encryption, and result processing.

My contribution to this project was the development of the **RSA-Based Vote Encryption Module**. I implemented the RSA public-key cryptographic algorithm to encrypt votes before they are stored or transmitted. The voter's selected candidate is converted into a suitable data representation and encrypted using the election authority's RSA public key. The encrypted vote can only be decrypted using the corresponding private key, preventing unauthorized users from accessing the original vote.
